DETAILED ACTION

Reason for Allowance

1. Regarding claims 1-21, the prior art fails to teach or suggest a method of receiving data transmitted from an access network to an access terminal, the method comprises the steps of estimating, based on the comparing, that communicating the data request information to the access network will not result in selection of the access terminal by the access network, and reducing the power of a reverse link signal transmitted from the access terminal to the access network based on the estimating, in combination with other limitations, as specified in the independent claim 1.

Regarding claims 22-32, the prior art fails to teach or suggest an access terminal apparatus that comprises a control processor configured to determine an access metric value based on measurements of at least one parameter of a signal received from the access network, generate data request information based on the measurements, compare the access metric value to an access metric threshold, estimate that communicating the data request information to the access network will not result in selection of the access terminal by the access network, and to alter the gain control signal based on the estimate, in combination with other limitations, as specified in the independent claim 22.

Regarding claims 33-40, the prior art fails to teach or suggest an access terminal apparatus that comprises a control processor configured to generate an estimate of whether transmitting a data request information signal would result in selection of the access terminal by
